

### **Abstract**

A gas/liquid separator assembly (1) is provided, the assembly (1) generally comprises a vessel (4) with an internally received serviceable separator element (9) arrangement. A unique inlet baffle arrangement (80,82) is provided to facilitate preseparation of liquid from gases, as gases are passed through the assembly (1). The assembly (1) is particularly adapted for use in air/oil separation, for example for compressors. Methods of assembly and use are also described.
